EDUCATION

BEng Product Design Engineering, Loughborough University

2025 – 2029

- Year 1 average: 76% (First-class standard)
- Relevant modules: Integrated Product Design (81%), Applied Engineering (80%), Engineering Science (86%), Product Design Methods (68%)
- Also studied: Mathematics for Product Design Engineering (74%), Materials and Manufacturing Processes (65%)

A Levels, Product Design (A*), Mathematics (B), Physics (B), Godalming College

2025

GCSEs, 9 GCSEs (grades 9–5) including Maths (8), Design Technology (8), Geography (9), Computer Science (7), Science (7, 7), King Edward's School Witley

2023

UNIVERSITY PROJECTS

EWB Smart Plant Pot

2025

Group Project, Six-Person Team | **Grade: 87%**

- Co-led the team, coordinating tasks and decisions to keep the project on track
- Designed a smart plant pot around the needs of its young users, helping children in Ladywood, Birmingham, to grow dwarf peppers for an Engineers Without Borders brief
- Prototyped and tested four 3D-printed LED mounting geometries, comparing brightness data to identify a dome as the most efficient shape
- Specified a PID-controlled grow light using PPFD and DLI calculations to ensure the plant gets enough light

AeroPress CAD Visualisation

2026

Individual Project | **Grade: 75%**

- Reverse-engineered an AeroPress into an accurate multi-part CAD assembly in Siemens NX
- Produced ray-traced renders across four scenes in Siemens NX, using HDR environments for accurate lighting and reflections

BRE Damp Prevention System

2025

Group Project, Three-Person Team | **Grade: 83%**

- Led concept generation for a Building Research Establishment brief, ranking key features and defining measurable requirements
- Built and tested an Arduino prototype utilising humidity and motion sensors, a servo and an RGB LCD display
- Evaluated real-world performance, recording bugs and gaps between testing and deployment conditions

BS8888 Engineering Drawings

2025

Individual Project | **Grade: 83%**

- Produced a fully dimensioned part drawing in line with BS8888
- Created a constrained assembly documented with multiple views, including a labelled front view, isometric and exploded isometric

OTHER PROJECTS

Modular Wall Light

A Level Product Design

2024

- Designed and built a modular wall light with interchangeable lampshades, earning an A* grade

Garden Seating Plan and Build

Freelance Client Project

August 2023

- Designed and built a bespoke seating area for an asymmetric garden space, working alongside a local tradesperson

WORK EXPERIENCE

Event Waiting Staff

Profiles Personnel (Agency)

September 2025 – Present
Various Venues, UK

- Served guests in a Jaguar Land Rover sponsored hospitality area at Goodwood
- Adapted quickly to new surroundings, working with unfamiliar people in a fast-paced environment
- Represented the client’s brand professionally, maintaining a high standard of service for corporate guests

Restaurant and Bar Staff

London and Middlesex Rifle Association

May 2024 – January 2025
Bisley, UK

- Delivered customer service across the bar and front of house, communicating clearly with customers and colleagues
- Collaborated with kitchen and bar teams to keep service running smoothly
- Managed part-time shifts alongside full-time A Level study, building time management skills

SKILLS

Design & Visualisation	Sketching, Siemens NX (modelling, assemblies, rendering), BS8888 drawing
Design Process	User-centred design, concept generation, prototype testing and evaluation
Prototyping	3D printing, laser cutting, CNC machining, woodworking
Electronics	Arduino, sensor integration, LED systems
Analysis	PID control, data analysis

EXTRA-CURRICULAR

Skateboarding. Skateboarding since 2019 and involved in the local skate community, including being featured in an advert for a local skate shop. Skateboarding has taught me that success is achieved through failure, something I find can be applied to engineering very frequently. Building mini ramps for skateboarding is also a hobby.

Weighted Calisthenics and Gym. Training with structured, progressive programmes has taught me that a systematic and calculated approach to tasks can break long-term goals into manageable steps.

Hockey. Played hockey throughout school and college, including for Godalming College’s men’s first team.
