## EDUCATION

**BEng Product Design Engineering**, Loughborough University 2025 – 2029

- Year 1 average: 76% (First-class standard)
- Top modules: Engineering Science (86%), Integrated Product Design (81%), Applied Engineering (80%)
- Also studied: Mathematics for Product Design Engineering (74%), Product Design Methods (68%), Materials and Manufacturing Processes (65%)

**A Levels**, Product Design (A*), Mathematics (B), Physics (B), Godalming College 2025
**GCSEs**, 9 GCSEs (grades 9–5) including Maths (8), Design Technology (8), Geography (9), Computer Science (7), Science (7, 7), King Edward's School Witley 2023

## UNIVERSITY PROJECTS

**EWB Smart Plant Pot** 2025
Group Project, Six-Person Team | **Grade: 87%**

- Co-led the team, coordinating tasks and decisions to keep the project on track
- Designed a smart plant pot for an Engineers Without Borders brief, aimed at helping children in Ladywood, Birmingham, to grow dwarf peppers
- Prototyped and tested four 3D-printed LED mounting geometries, comparing brightness data to identify a dome as the most efficient shape
- Specified a PID-controlled grow light using PPFD and DLI calculations to ensure the plant gets enough light

**BRE Damp Prevention System** 2025
Group Project, Three-Person Team | **Grade: 83%**

- Led system ideation for a Building Research Establishment brief, ranking key features and defining measurable requirements
- Built and tested an Arduino prototype utilising humidity and motion sensors, a servo and an RGB LCD display
- Evaluated real-world performance, recording bugs and gaps between testing and deployment conditions

**AeroPress CAD Visualisation** 2026
Individual Project | **Grade: 75%**

- Reverse-engineered an AeroPress into an accurate multi-part CAD assembly in Siemens NX
- Produced ray-traced renders across four scenes in Siemens NX, using HDR environments for accurate lighting and reflections

**BS8888 Engineering Drawings** 2025
Individual Project | **Grade: 83%**

- Produced a fully dimensioned part drawing in line with BS8888
- Created a constrained assembly documented with multiple views, including a labelled front view, isometric and exploded isometric

## OTHER PROJECTS

**Modular Wall Light** 2024
A Level Product Design

- Designed and built a modular wall light with interchangeable lampshades, earning an A* grade

**Garden Seating Plan and Build** August 2023
Freelance Client Project

- Designed and built a bespoke seating area for an asymmetric garden space, working alongside a local tradesperson

**GCSE Design Technology Mentoring** [2023]
Volunteer Mentor

- Mentored a GCSE student through their Design Technology coursework, drawing on my experience of achieving 96%

## WORK EXPERIENCE

**Event Waiting Staff** September 2025 – Present
Profiles Personnel (Agency) *Various Venues, UK*

- Served guests in a Jaguar Land Rover sponsored hospitality area at Goodwood
- Adapted quickly to new surroundings, working with unfamiliar people in a fast-paced environment
- Represented the client's brand professionally, maintaining a high standard of service for corporate guests

**Restaurant and Bar Staff** May 2024 – January 2025
London and Middlesex Rifle Association *Bisley, UK*

- Delivered customer service across the bar and front of house, communicating clearly with customers and colleagues
- Collaborated with kitchen and bar teams to keep service running smoothly
- Managed part-time shifts alongside full-time A Level study, building time management skills

## SKILLS

| | |
|---|---|
| **CAD & Visualisation** | Siemens NX (modelling, assemblies, rendering), BS8888 drawing, Sketching |
| **Prototyping** | 3D printing, laser cutting, CNC machining, woodworking |
| **Electronics** | Arduino, sensor integration, LED systems |
| **Analysis** | Testing and validation, data analysis |

## EXTRA-CURRICULAR

**Skateboarding.** Skateboarding since 2019 and involved in the local skate community, including being featured in an advert for a local skate shop. Skateboarding has taught me that success is achieved through failure, something I find can be applied to engineering very frequently. Building mini ramps for skateboarding is also a hobby.

**Weighted Calisthenics and Gym.** Training with structured, progressive programmes has taught me that a systematic and calculated approach to tasks can break long-term goals into manageable steps.

**Hockey.** Played hockey throughout school and college, including for Godalming College's men's first team.
